

aquamix

WETTING AGENT FOR GROWING MEDIA - (LIQUID OR GRANULE)

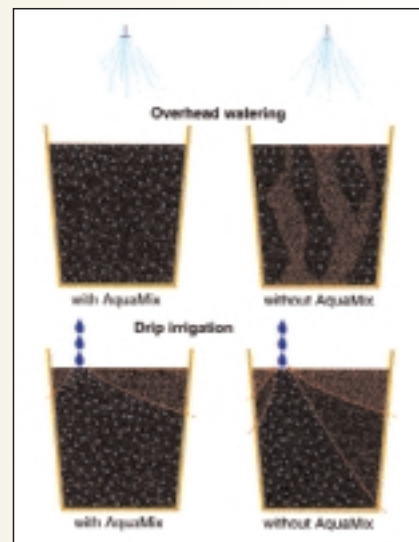

Aquamix is especially designed for peat and bark based composts. This non-ionic wetter combines the performance of normal wetting agents with additional benefits.

- Lasting 6 months plus
- Unbeaten price/quality per m²

Aquamix can be used at the recommended rate by either incorporating into the media or in the watering system:

- Increase the soil/media permeability.
- Easy and simple to mix, even under cold conditions.
- Improved efficiency of chemicals and fertilisers.
- No dry spots or excess water in the compost

Fargro Code: 5 litres Liquid WETL
Fargro Code: 10kgs Granules WETG

WATER STORING GRANULES

Application is easy as Swellgel is a free-flowing granular material. Simply mix in to any growing media followed by either irrigation or rainfall, this will activate the granules to rapidly absorb hundreds of times their own weight of water, so forming thousands of self-contained reservoirs giving the appearance of discrete firm gel 'clumps'.

Pack Size: 1kg

Fargro Code: SWELL

*Also available in 25kg bags **

HORTICHEM

CELCOTE - WATER MANAGEMENT ADDITIVE

An incorporated polymer to improve water holding capacity of organic composts.

Celcote is a naturally occurring cellulose based product modified to enable it to lock on to organic fibres. Celcote is activated with the first watering and migrates within the compost.

SAVES WATER - 25% OR MORE

Celcote treated compost retains more water for plant growth. In the initial 24 hours after watering Celcote reduced the loss by 50% and continues to retain more water for days. The retained water is freely available to the plant.

This effect produces an overall saving in water usage of about 25% for commercial hardy ornamental stock producers with no unsightly jelly.

2kg Bag + 25kg

Miscellaneous

BROADLEAF P4

Broadleaf P4 water-storing granules can be easily blended with any growing or planting medium, storing 100's of times their own weight of water in the root zone, for use by plants as required.

Available in 2kg and 10kg

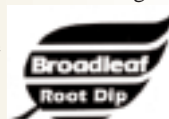

Fargro Code: BROAD (2kg)

To order (10kg)

BROADLEAF ROOT DIP FOR BASE ROOT TRANSPLANTING

- Surrounds base roots with many days supply of water
- Stops bare-root stock from drying out
- Maintains bare roots in prime condition
- Ensures survival between lifting and re-planting
- Promotes development of new roots and water-absorbing root hairs
- Ideal for international transporting of bare root plant material.
